

Effective Strategies – Equitable Systems – Strong Communities

Evaluating Health Equity: Your Role & Where Do You Start?

Annapurna Ghosh, M.P.H.

Michelle Revels, M.A.

Today's Takeaways

1. Framework for evaluators whose goal is to promote health equity
2. How to identify the drivers and indicators of health equity
3. Evaluation methods to advance health equity

Agenda

Introductions

Building Blocks of Health Equity

Systems Lens in Evaluation

Practical Application in Planning and Design

Summary and Discussion

Meet Community Science

Effective Strategies. Equitable Systems. Strong Communities.

Community Science is an award-winning strategy, research and development organization that works with governments, foundations, and non-profit organizations on solutions to social problems through community and other systems changes fostering learning and improved capacity for social change.

A BCT Partners Company

Welcome

Your Hosts:

Annapurna Ghosh
Managing Associate
Community Science

Michelle Revels
Senior Associate
Community Science

Let's Level Set: What Do We Mean By...

Equity

Structural Racism

Health Disparities

Health Equity

What is Equity?

Equity is achieved when people, regardless of their race first and foremost, gender, sexual identity, disability, socioeconomic status, and any other demographic characteristic, and place of residence have:

Fair Access

Fair access to the resources and opportunities they need to reach their full potential.

Rights

The rights to these resources and opportunities.

Conditions

The conditions to take advantage of these resources and opportunities.

Freedom

The freedom from any discrimination to obtain these resources and opportunities as respected by institutions and the law.

What Are Health Disparities?

Differences in the **incidence, prevalence, mortality, and burden of diseases and other adverse conditions** as well as access to, and use of, of health care services for prevention, diagnosis, and treatment across different racial, ethnic, socioeconomic, gender, differently abled, and other historically disadvantaged groups.

What is Health Equity?

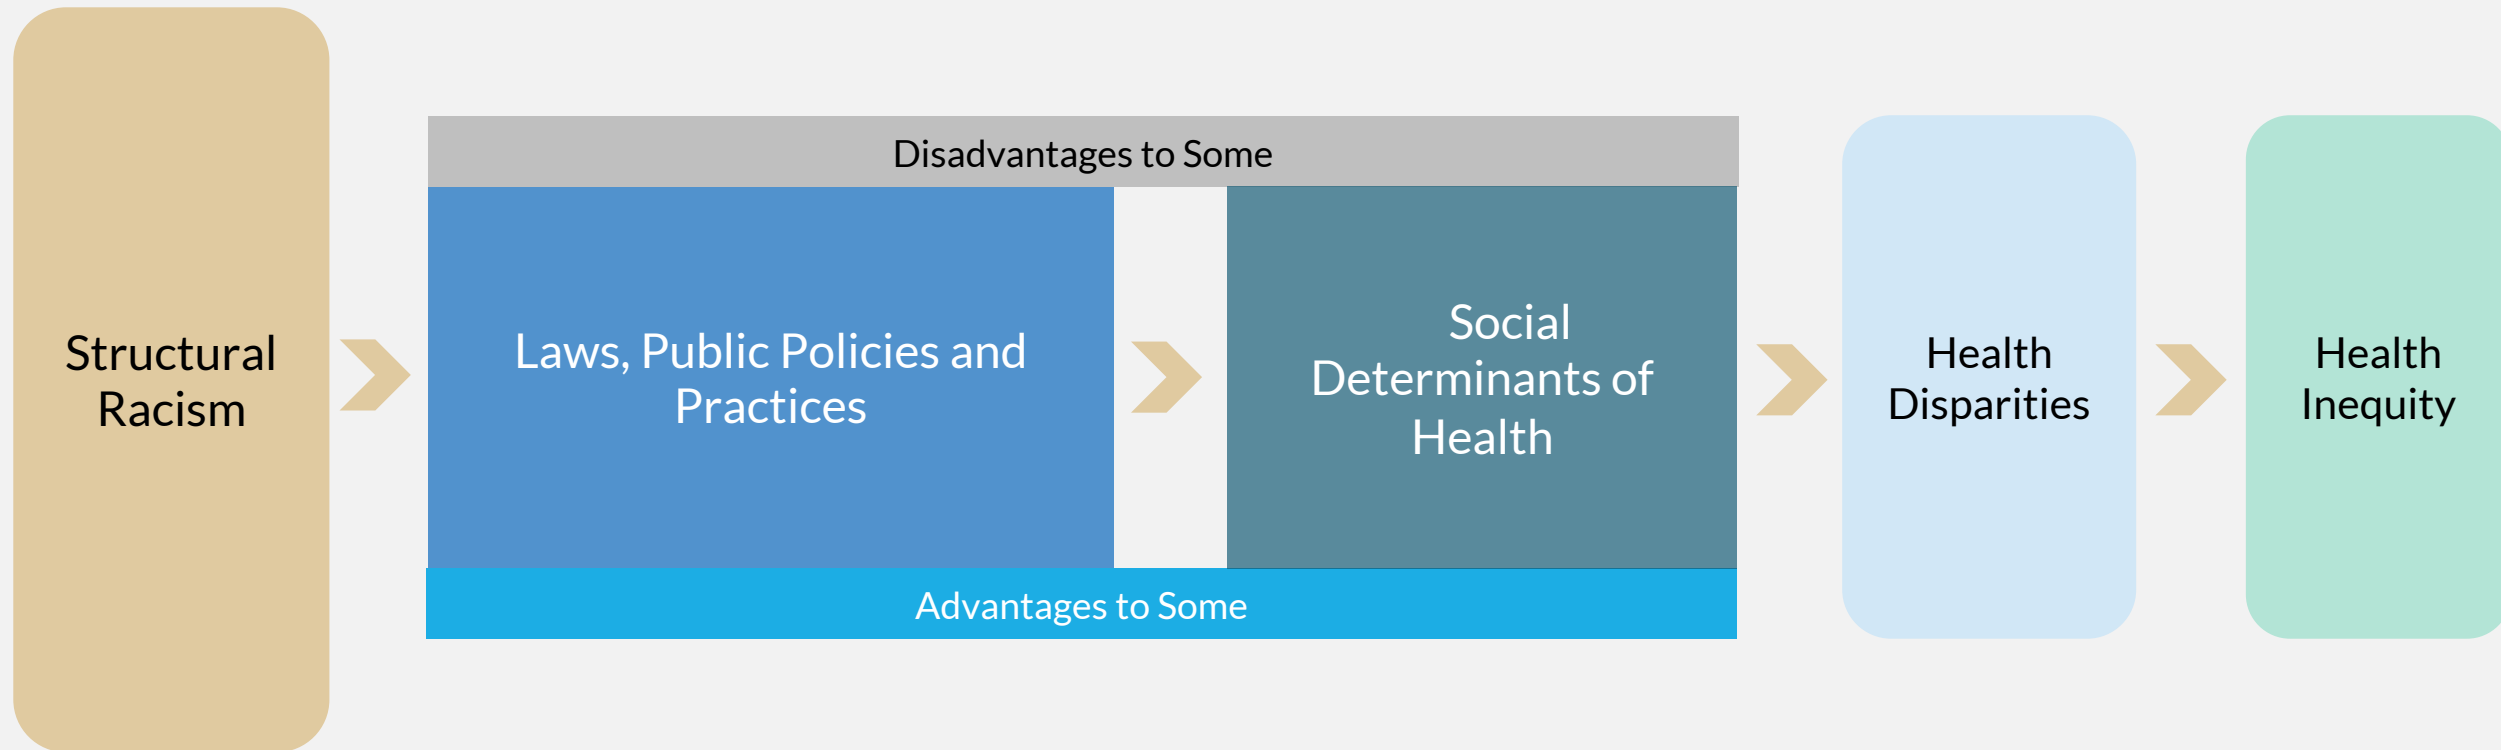

Every person and community has fair access and the ability to take advantage of healthcare resources and opportunities in order to attain their full health potential. No person or community is disadvantaged from achieving this potential because of race and ethnicity, socioeconomic status, gender, or other socially determined circumstances.

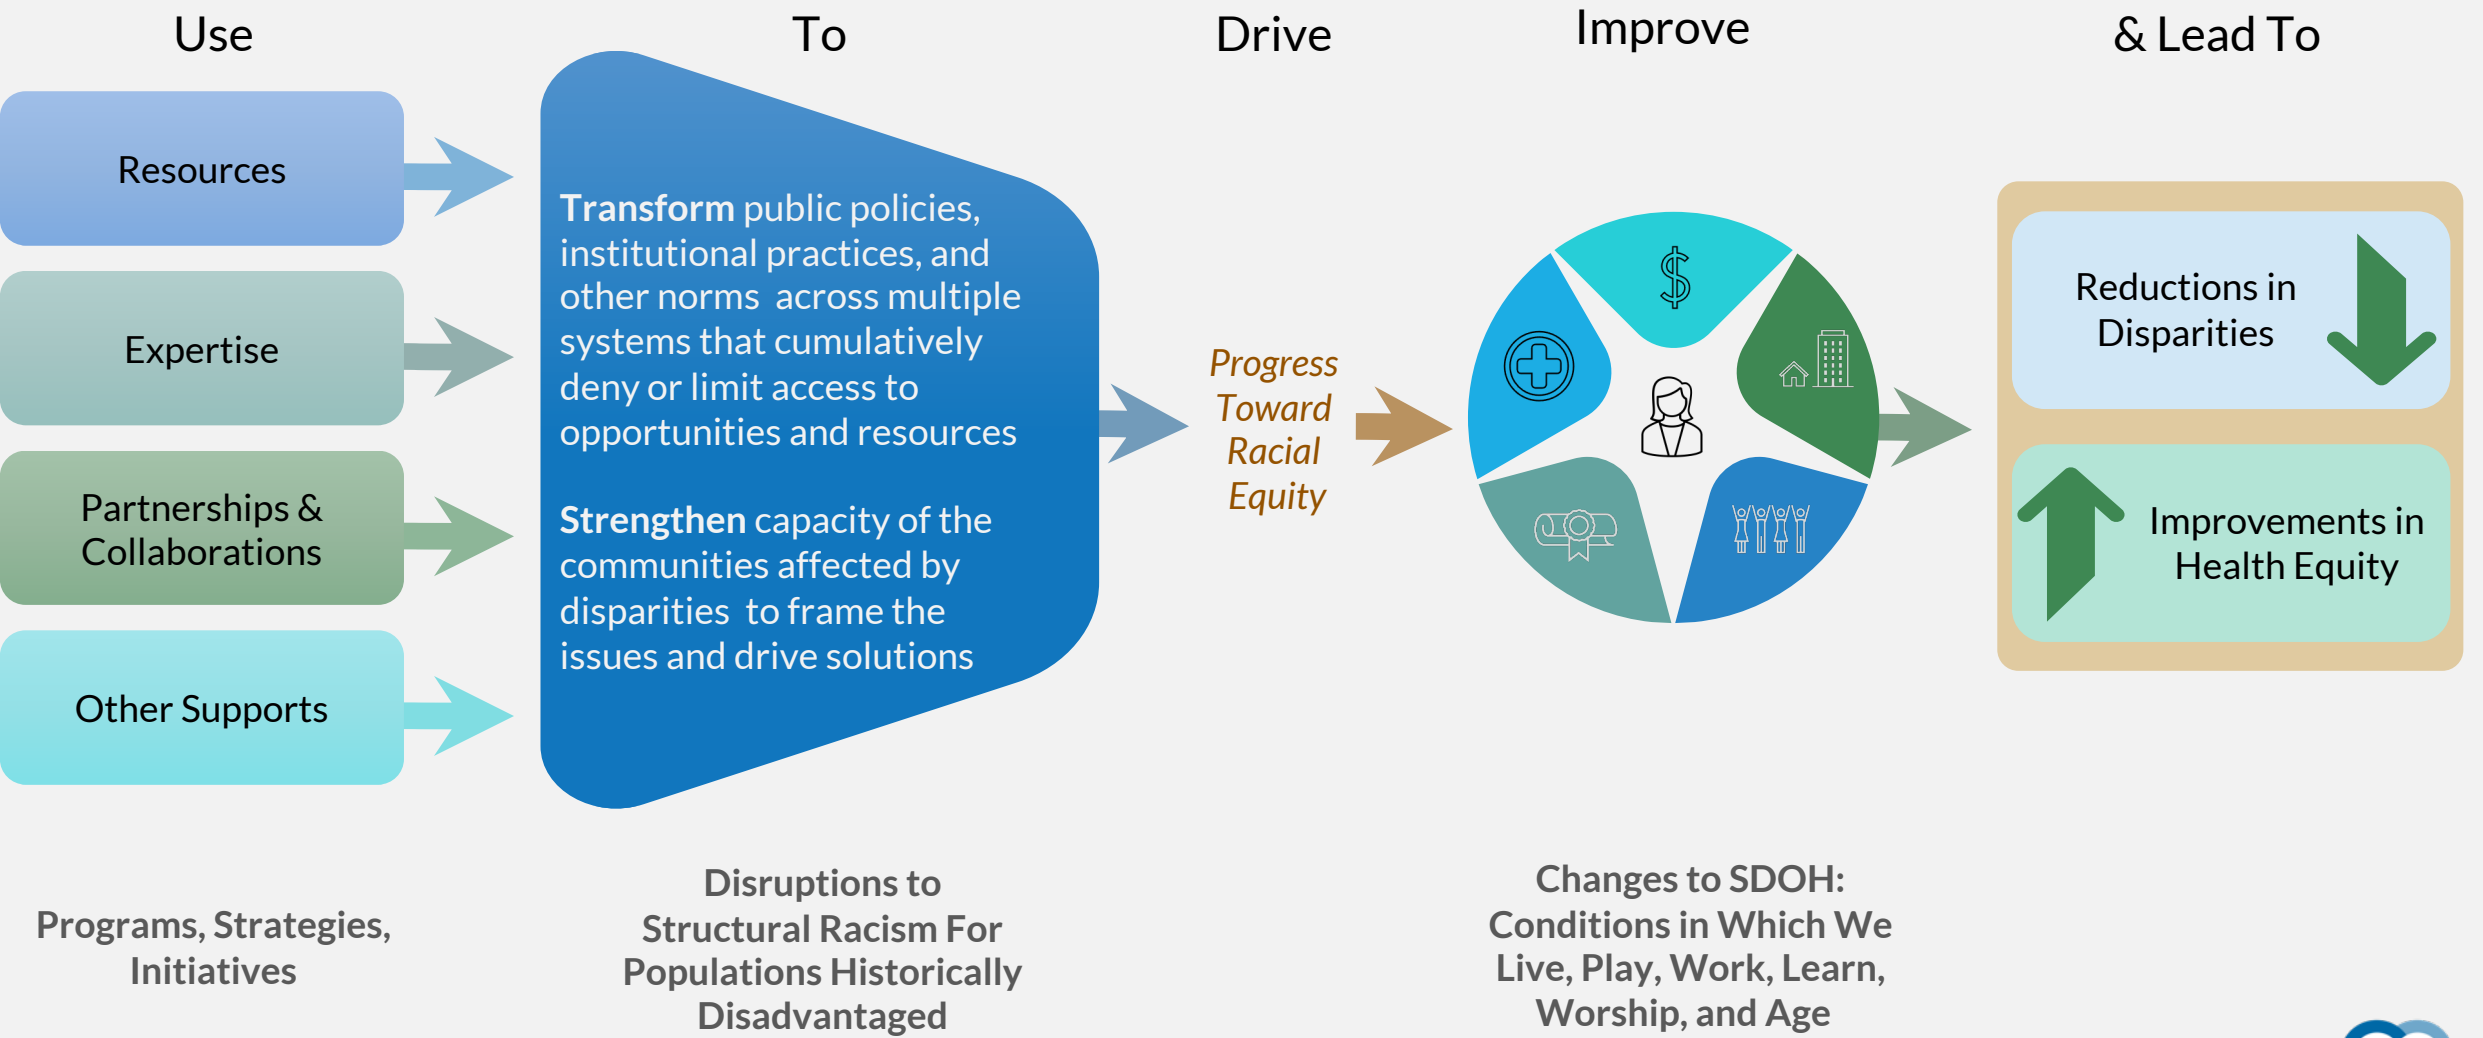

What is Structural Racism?

Laws, public policies, institutional practices, and other norms across multiple systems that cumulatively deny or limit access to opportunities and resources based on race (or the way people look or the color of their skin)

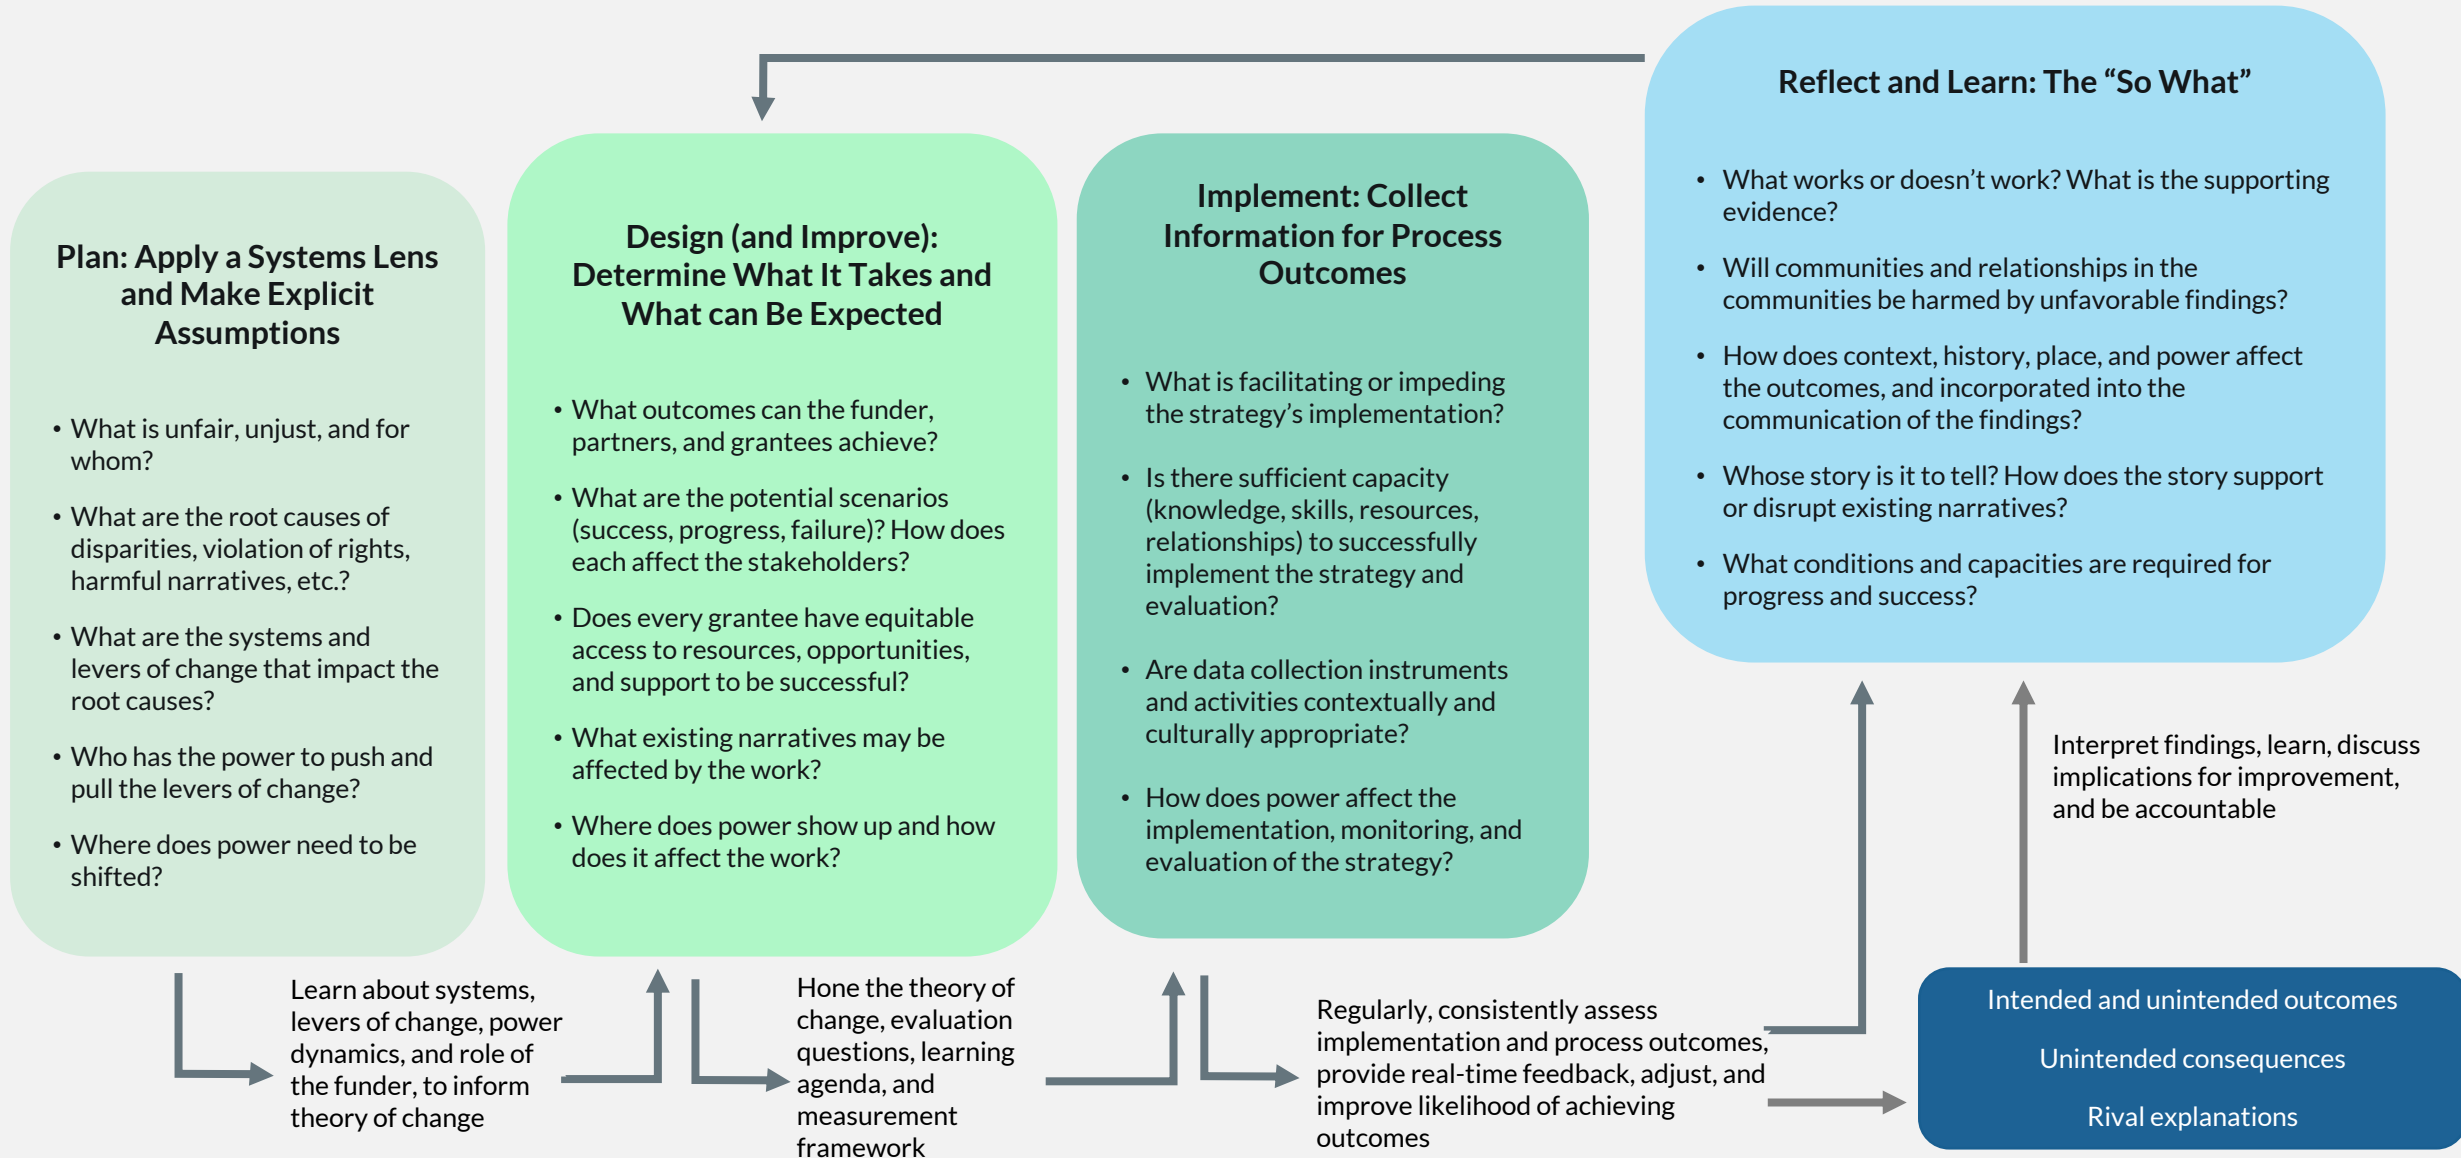

What Causes Health Inequity?

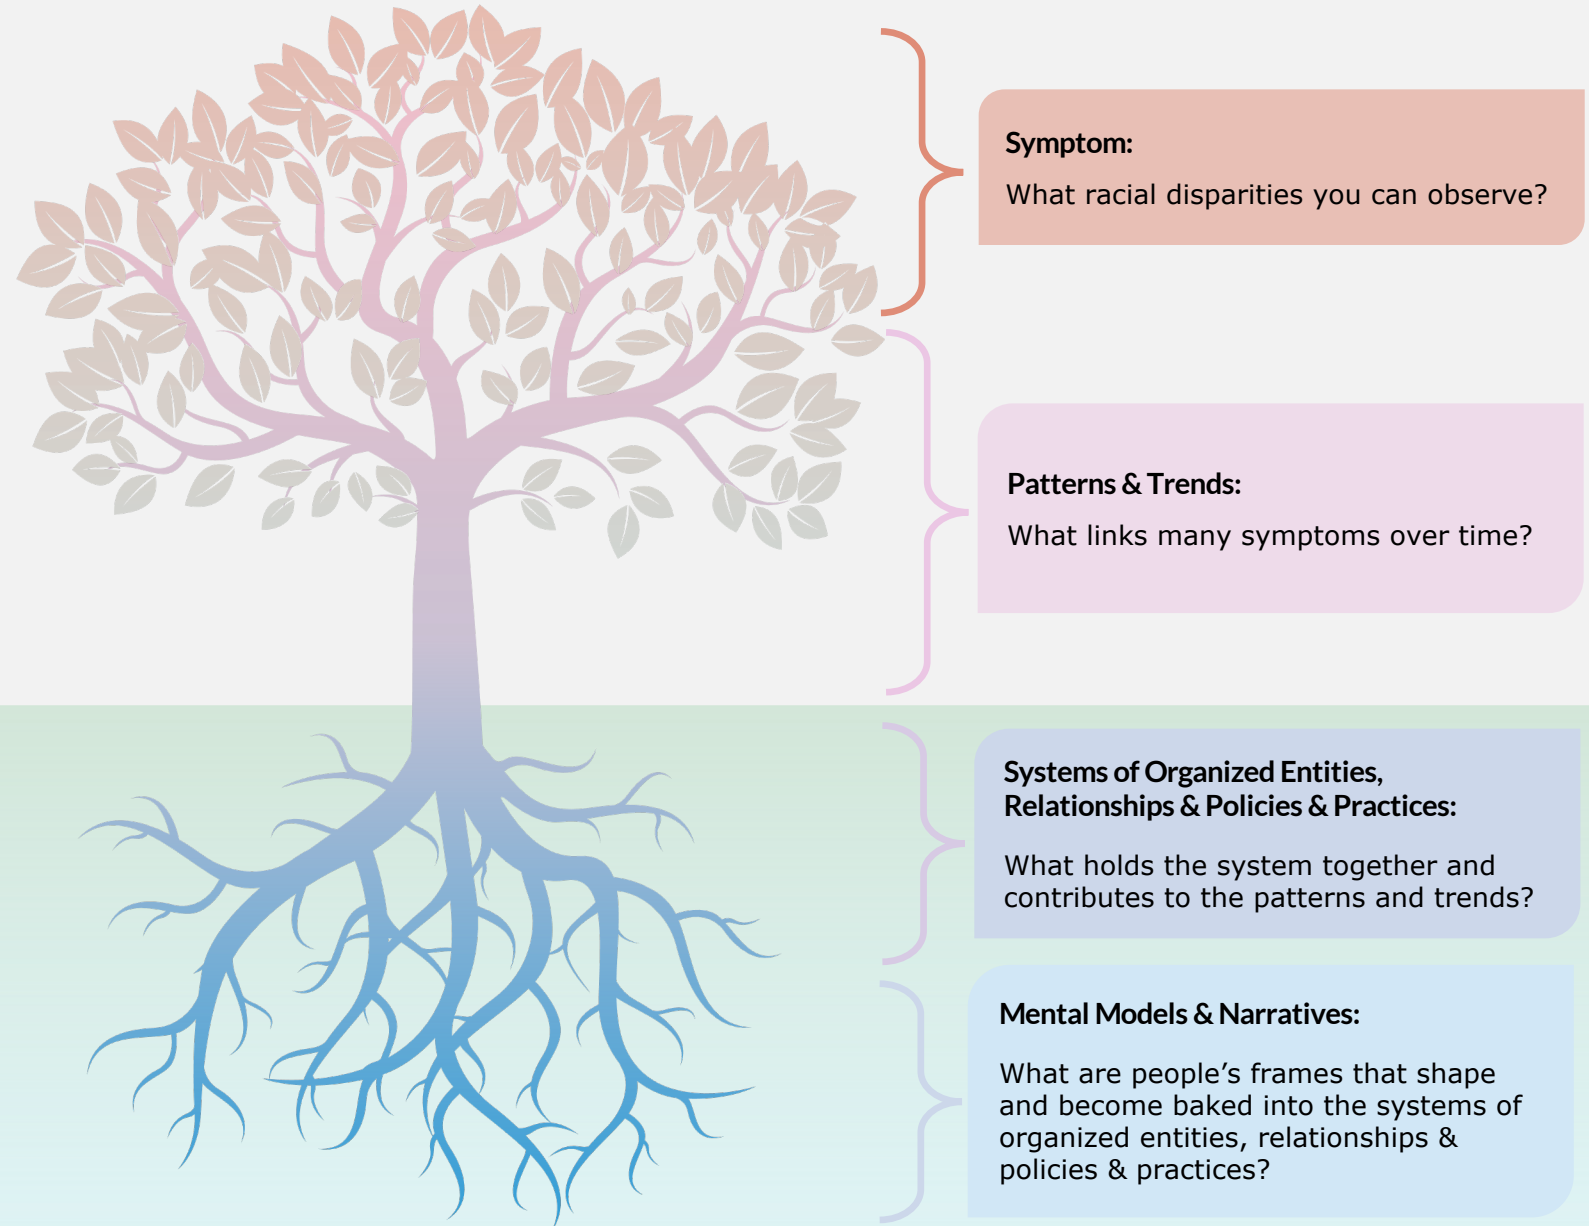

Improving Health Equity

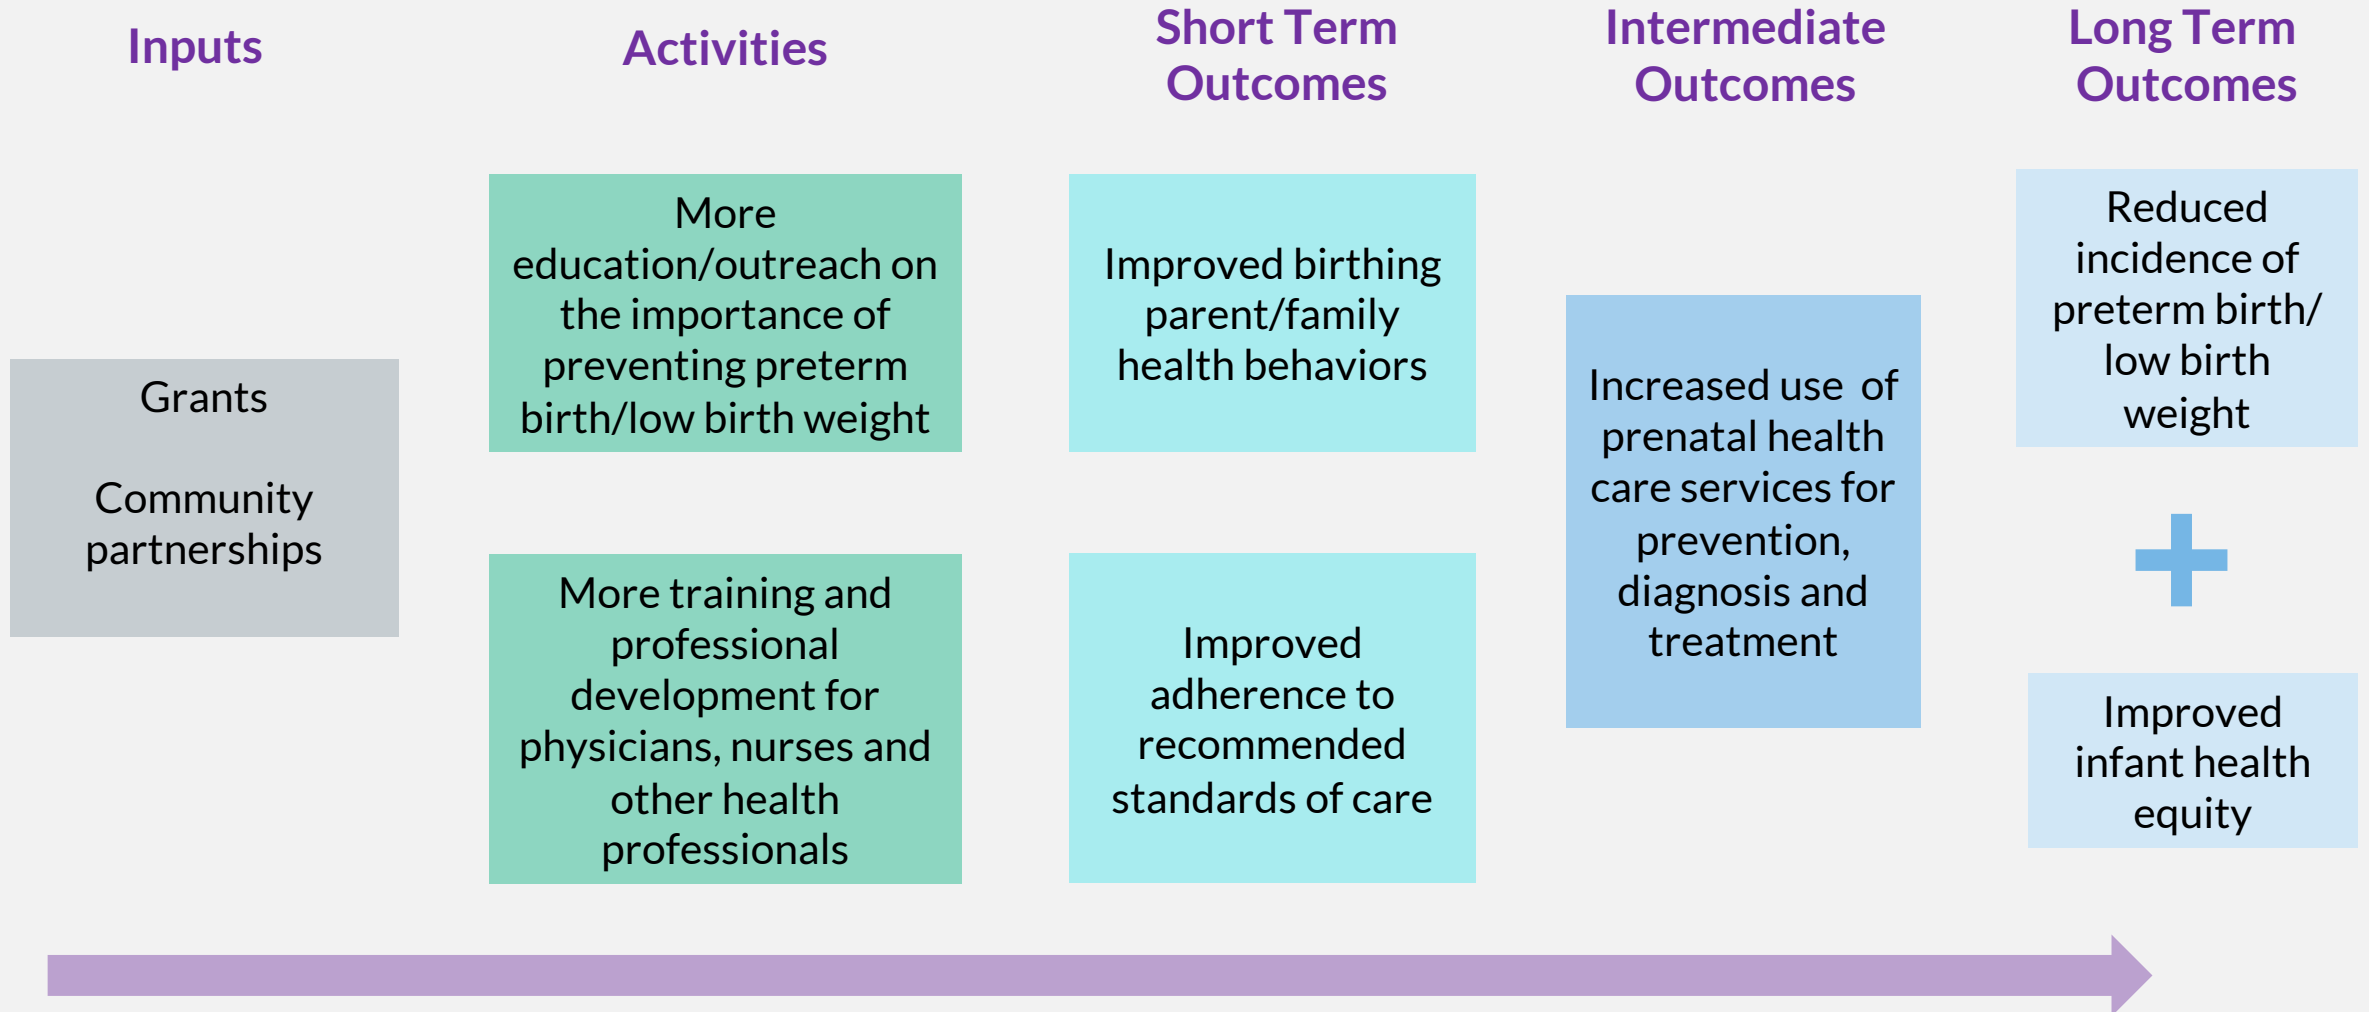

Evaluation, Learning, and Continuous Improvement Process

Employing a Systems Lens to Make Equity More Explicit

A Basic Theory of Change and Logic Model

Using a Systems Lens to Explore Structural Racism

Mental Models and Narratives

Is lack of understanding/education/outreach the main reason for preterm/low birthweight? Who makes what decisions about education and outreach needed? **Why these decisions?**

Patterns & Trends

Do people have what is needed to take full advantage of services to prevent preterm/low term birth? **Why not?**

Long Term Outcomes

Mental Models and Narratives

What implicit and explicit narratives exist about preterm birth/low birthweight? How do these narratives vary by race, ethnicity, and/or income? What drives these narratives? **Why?**

Patterns & Trends

What other outcomes are affected by low/inadequate utilization of prenatal health care services? **Why?**

Symptoms

Which racial/ethnic groups are most likely to experience preterm/low birth weight? **Why?**

Is the data sufficiently disaggregated to know who is disproportionately impacted?

Systems

Who is and who is not able to access opportunities? **Why or why not?**

Systems

How has/does racism affect SDOH such as education, housing, healthcare accessibility/affordability, and community context? What policies/practices contribute to higher rates (e.g., who is reimbursed as a provider, elective delivery, language access?) Are there enough providers? **Why or why not?**

Symptoms

Which providers are performing at a higher level and which ones are not? **Why?** Is the data sufficiently disaggregated?

Planning and Designing the Evaluation

- **Engage Those Who are Supposed to Benefit**
 - Ask, understand, and set realistic parameters for participation
 - Explore ways to help offset costs of participation (e.g., honorarium, meals, transportation vouchers, etc.)
 - Create user-friendly/tailored communication products
- **Be Cognizant of Power Dynamics Within the Evaluation Team**
 - Co-develop group agreements
 - Identify and address capacity-building needs

Planning and Designing the Evaluation

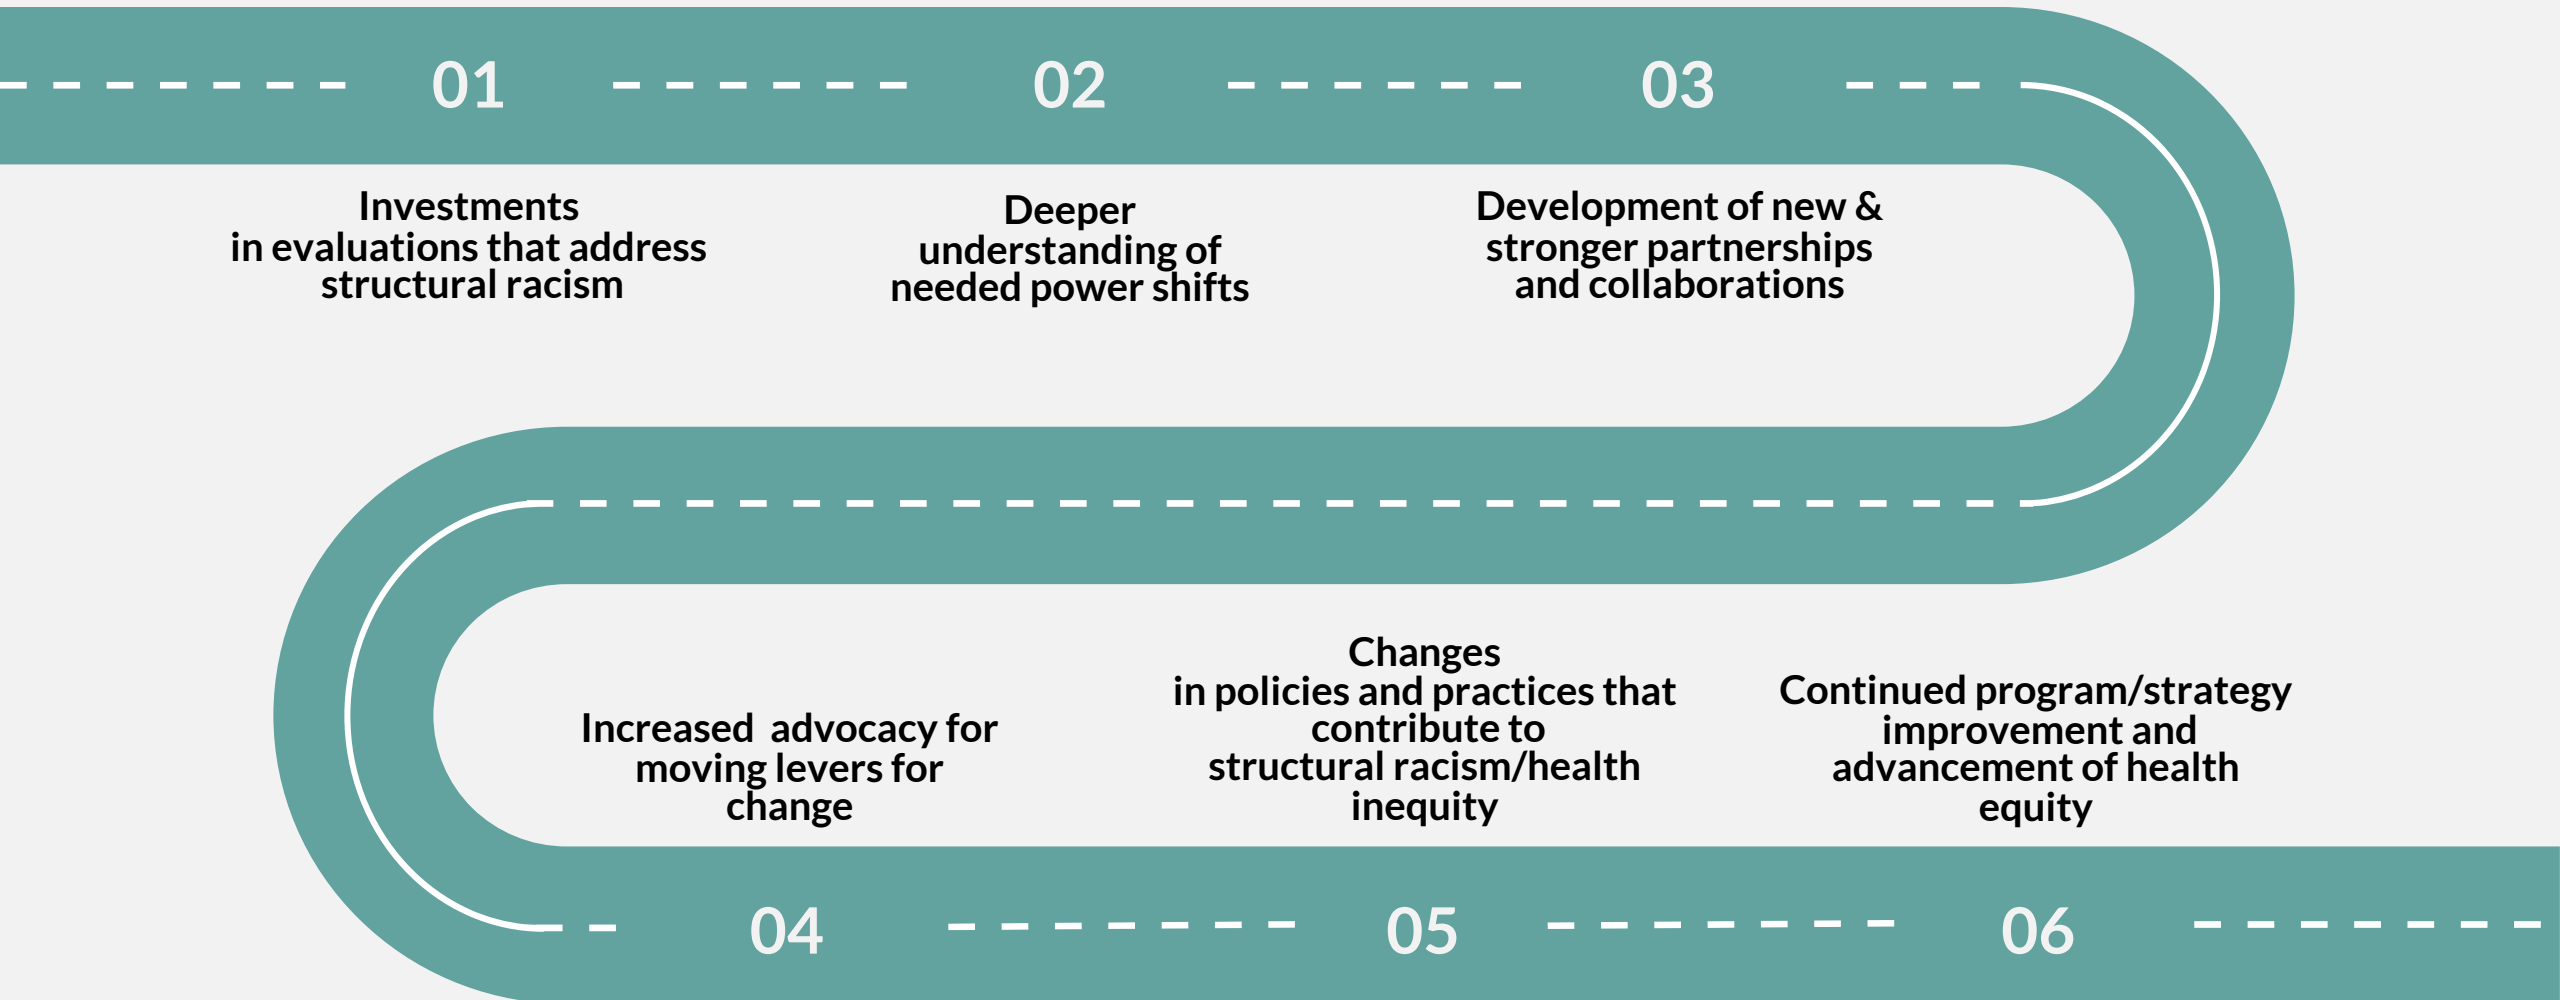

- **Do Your Homework**

- Literature review, environmental scan, expert interviews, etc.
 - Intentionally explore the role of structural racism
- Allot adequate time

- **Facilitate Learning**

- Ask the hard questions
- Use the “systems tree” as a tool to engage and guide conversations with partners, including community members
- Provide space for disagreement and reflection
- Develop a shared understanding of goals, expectations, and limitations

Evaluations in Service of Equity Can Lead to...

Discussion

Effective Strategies
Equitable Systems
Strong Communities
